

INTERNAL · ALEX → DAMON

Status brief — what's *live*.

Everything is merged to main and pushed. Seven of the eight §8 checks from your quoting-engine briefing are built, tested, and passing — 32 automated tests plus all four compliance checkers green — and the eighth (the vendor dashboard hook) has its foundation in place. Below: what's live, what it does, and the calls I need from you.

FROM ALEX · JUL 7, 2026 · REPO: UNITE_2_0 · BRANCH: MAIN

01 · WHAT WENT LIVE IN THIS PUSH

Three bodies of work, one *merge*.

- 1. The "Precision" redesign — full visual system replacement across all 49 pages. Bone paper, surgical green, serif display, mono data layer. The AI-startup tells (gradient shimmer text, glass, orbs) are gone. There's now a written brand & voice guideline (attached separately).
- 2. PRD-28/29 copy compliance — the honest-copy sweep: single Georgia warehouse, no fake roles or counts, retired phone numbers, .net emails. Machine-enforced — the build fails if forbidden copy reappears.
- 3. The vendor-onboarding / quoting-engine build — your briefing, end to end. Detail in §2.

BPA conflict — closed. I reconciled your two June 29 commits during the merge: MSPV BPA 36C24123A0077 is now the only contract number anywhere on the site (nav, homepage, government page, printed quotes and invoices, meta tags), labeled "MSPV BPA" as you specified.

02 · YOUR §8 CHECKS

Seven built and tested, one *scoped*.

YOUR CHECK	STATUS	WHAT'S ACTUALLY THERE
1 · Field mapping vs v2 template	BUILT	Parser ingests all 53 columns — compliance, logistics, carton dims, price breaks, tooling. Fuzzy header matching + AI fallback for messy vendor sheets.
2 · Flexport API coverage	BUILT	Freight quoting (LCL / FCL / AIR) plus a new classification call. Origin port now comes from the vendor's sheet (was hardcoded); freight math uses real carton dimensions (was a guess).

YOUR CHECK	STATUS	WHAT'S ACTUALLY THERE
3 · Free validation layer	BUILT	USITC HTS lookup + openFDA (device class, 510(k), establishment reg, recalls) run before any paid call. Free APIs pre-fill; Flexport confirms.
4 · Auto-export to Flexport template	BUILT	One click on the quote screen produces the classification file in the partner's exact column layout. No more manual re-keying.
5 · SKU-match engine	BUILT	Every uploaded line is checked against our catalog — exact and fuzzy. In-stock hits show a "buy now" badge on the quote itself.
6 · Two private-label paths	BUILT	Every quote line carries side-by-side offers: Unite Ready (stock or import) and Unite Custom (private label, tooling amortized across the order qty, sample cost and lead shown).
7 · No-quote feedback loop	BUILT	Anything we can't quote — unmatched shortage-list lines, unparseable rows, dropped lines — is captured as a demand signal with a reason code and a desk queue. Nothing evaporates anymore.
8 · Vendor dashboard hook	PARTIAL	Foundation is in (parse-quality scoring, miss signals). The motivational dashboard itself is designed but not built — candidate for next sprint, see §4.

Two bugs from the audit, both fixed

- **The duty bug.** When a vendor left the HTS code blank, the engine silently defaulted to a generic textile code and quoted the wrong duty. It now uses the manufacturer's HS code as a hint, flags the line HTS PENDING, and the desk confirms via classification before the quote is final.
- **Section 301 was missing entirely.** China-origin goods were being quoted without the 25% / 7.5% surcharges — on a Class II device from Shenzhen that's the difference between a winning quote and a money-losing one. A Chapter 99 pre-filter now applies List 1–4A rates automatically.

03 · VERIFICATION

All *green*.

TESTS	32 / 32 passing — parser, 301 duty math, offer variants, the exporter, the miss loop, and a full end-to-end quote run
CHECKERS	45 / 45 passing — copy rules, PRD requirements, quoting invariants, consignment / ordering / WMS
BUILD	Lint clean · production build clean · 122 routes prerendered

04 · WHAT WE CAN DO NEXT

Your call on *priority*.

1. **Vendor dashboard "hook"** (check 8, the unfinished one). Data-quality score per vendor, quote-win feedback, multilingual UI (zh / vi / es). This is the retention play from your briefing — my pick for next.
2. **Live Flexport credentials.** Everything runs against a faithful local stub today; the real API is one env var away. Needs the account and keys from you.
3. **GUIDID templates + FDA listing flow** — the compliance-as-a-service piece from your notes. Class I/II templates exist in your docs; wiring them into vendor onboarding is roughly a one-sprint build.
4. **Quote-miss digest.** The demand signals are being captured; a weekly roll-up ("we failed to quote \$X across N lines, top reasons") would turn it into a sourcing to-do list.

5. **Pentastar pilot.** The Unite Custom offer path is exactly the machinery the pilot needs; we can run their line sheet through it as a real-world shakedown.

—— 05 · DECISIONS I NEED FROM YOU

Four *calls*.

1. **Flexport API credentials** — needed to take item 2 in §4 live.
2. **Confirm the inboxes** `privacy@` · `billing@` · `surplus@unitemedical.net` exist — they appear in customer-facing copy. Otherwise I route them to `support@` / `accounting@`.
3. **Priority order for §4.** My recommendation: dashboard hook → miss digest → GUDID.
4. **Deployment.** Main is pushed and ready; say the word if you want it promoted to production hosting now versus after you click through the new quote flow.
