

INTERNAL · ALEX → DAMON

Launch handoff — it's *deployed*.

Everything from your Jul 10 handoff is built and live on production hosting — including the GUDID/UDI compliance service you prioritized, with your Flexport key active server-side. The public domain still serves the old site; that cutover is the last switch and it's yours to call after the walkthrough.

FROM ALEX · JUL 10, 2026 · WALKTHROUGH: UNITE-2-0.VERCEL.APP · REPO: UNITE_2_0 / MAIN

01 · YOUR WALKTHROUGH LINK

Click through it *here*.

PRODUCTION URL	https://unite-2-0.vercel.app — the real deployment, not a preview
ADMIN DESK	/admin · UDI board at /admin/udi · new quote at /admin/quotes

Suggested route, matching what you said you wanted to verify:

- Quote flow** — Admin → Quotes → New quote. Upload a vendor sheet (v2 template or any messy CSV). The preview shows HTS hints, stock-match badges, and the classification-export button.
- 301 math on a China line** — include a China-origin item; the quote breaks out MFN + Section 301 duty components and flags unconfirmed HTS as pending.
- Side-by-side offers** — every line carries Unite Ready / Unite Custom variants with price breaks and amortized tooling.
- SKU-match buy-now** — upload a line matching catalog stock; the in-stock badge and buy-now path appear on the quote itself.
- UDI / GUDID desk** — prefix capacity board, gate queue, Model C acknowledgment, intake editor, label paths. Accept a quote with an import or private-label line and watch the gate open automatically.

02 · GUDID / UDI

Your spec, *finished*.

Everything in the Phase 1 spec is built, tested (16 dedicated tests), and live.

SPEC ITEM	WHAT'S LIVE
Prefix registry	All 5 GS1 prefixes seeded with medical flags. New Unite DIs draw from 0850089282; the non-medical 0850052096 can never issue a device DI.

SPEC ITEM	WHAT'S LIVE
DI assignment + capacity	Sequential GTIN-13s with valid check digits; used-vs-remaining per prefix on the admin board; alert at ≤ 20 remaining.
Models A / B / C	A assigns our DI. B requires the customer's DI (they submit GUDID). C is hard-blocked until the customer signs all four acknowledgment terms — the gate you asked for, enforced in code.
Class 1 / 2 intake	In-app intake editor with live validation (Class 2 demands a real K-number; Class 1 takes "Exempt"), plus a downloadable intake workbook generated from the same field list — sheet and validator can't drift.
Both label paths	Path 1 generates the label spec from captured fields — Model C labels automatically carry "Distributed by Unite Medical". Path 2 compliance-checks uploaded artwork against the required-elements list.
Post-quote gate	Opens on order commit for import / private-label lines without a GTIN. Never blocks a quote or an acceptance. PI data (lot / expiry / mfg) stays at production; flags only at intake.
Portal submission	Records march draft → ready to label → ready for GUDID → submitted. You submit via the portal and mark it here; Model B records can't be marked — the customer submits those.

03 · FLEXPOR T

Wired and *live*.

- **Your question — no OAuth needed.** The bearer API key is sufficient; don't generate the Client ID / Secret.
- The key is set in Vercel production env (FLEXPOR T_API_KEY, encrypted, server-side only — never in the browser bundle, never in git). The live health check confirms **Flexport = configured** in production.
- **Housekeeping:** the one-pager also carried the OAuth client secret in plaintext. We're not using it, but since it traveled by document, consider deleting or rotating that credential pair in Flexport admin. The API key itself is fine.

04 · YOUR OTHER TWO DECISIONS

Both *done*.

- **Inboxes** — billing@ → accounting@; privacy@ and surplus@ → support@, everywhere they appeared (legal pages, invoices, surplus marketplace, finance notifications).
- **Priority order** — GUDID built first, as directed. Next in your order: vendor dashboard hook, then the quote-miss digest. Both ready to start on your go.

The *domain*.

`www.unitemedical.net` still serves the old site. The new platform is fully deployed behind `unite-2-0.vercel.app`. When your walkthrough checks out, say go and I'll do the cutover — add the domain to the Vercel project and update DNS. Until then nothing customer-facing has changed; exactly the hold you asked for.

TESTS	48 / 48 passing · 45 / 45 compliance checks · lint clean · 122 routes prerendered
SHAKEDOWNS	Quote flow is ready for Umendra's sheet and the Pentastar pilot — the 53-column mapper tolerates trimmed sheets, so Pentastar Lite parses through the same path
PARKED	UFLPA / forced-labor layer — logged in the spec docs, not built, per your hold
